4. Have you or anyone in your household tested positive for COVID-19? Yes No
- a). If **yes**:
- Contact your personal physician.
 - Obtain medical release to continue to see patients.

COVID INFORMATION

General Facts from CDC and WHO for Everyday Preventive Actions to Help Prevent the Spread of Respiratory Diseases:

- If you are sick (cough/fever), don't go to work or school. Stay home and contact your primary care physician for guidance.
- Avoid close contact with people who are sick.
- Wash your hands with soap for 20 seconds frequently, especially after going to the bathroom, before eating or after coughing/sneezing. Singing "Happy Birthday" two times through is about 20 seconds. If soap is not available, use an alcohol-based hand sanitizer with at least 60% alcohol.
- Avoid touching your face/nose/eyes.
- If you cough or sneeze, do so into a tissue and immediately dispose of the tissue and wash your hands. If a tissue is unavailable, cough/sneeze into the crook of your elbow.
- Clean and disinfect frequently touched objects and surfaces using a regular household cleaning spray or wipe.
- Use of facemasks:
 - o CDC currently recommends everyone should wear a cloth face cover when they have to go out in public, for example to the grocery store or to pick up other necessities.
 - Cloth face coverings should not be placed on young children under age 2, anyone who has trouble breathing, or is unconscious, incapacitated or otherwise unable to remove the mask without assistance.
 - o Facemasks should be worn by people with known COVID-19 infection.
 - o Healthcare providers should wear masks in accordance with CDC recommendations when providing care to someone known to have COVID-19.
- If you believe you may have COVID-19, contact your primary care physician for guidance.
